## R E P O R T.

---

THE Council of the Auckland Institute has great pleasure in stating that the third year of its existence has been marked by a large accession of members, and by direct evidence of increased interest in the work in which it is engaged. Much of this is, without doubt, due to the free distribution of the annual volume of Transactions of the New Zealand Institute to its members, and is the more satisfactory from the fact that a fair proportion of the contents of that volume was contributed by the Auckland Institute.

During the past year eight meetings have been held, at which papers have been read on the following subjects:—On the Botany of certain parts of the Waikato Country, by T. Kirk; On the Occurrence of Littoral Plants in the Upper Waikato, by T. Kirk; On the Sailing Flight of the Albatross, in reply to J. S. Webb, by Captain F. W. Hutton, F.G.S.; On Certain Changes in the Habits of Rats, at Raglan; On the Nests and Eggs of Five Species of New Zealand Birds, not previously described, by Captain F. W. Hutton, F.G.S.; On the Use of Saltwater in the Field Boiler, by James Stewart, C.E.; An account of Experiments to determine the Power required to Work the Flax Machines in common use in the Province of Auckland, by James Stewart, C.E.; Remarks upon New Zealand Flax as a Paper-making Material, by T. Kirk; On the Relative Ages of the Waitemata Series and the Brown Coal Series of Waikato and Drury, by Captain F. W. Hutton, F.G.S.; On a Self-acting Clamp Wire Tramway, specially adapted for hilly districts, by F. W. Wright, L.M.B.T.A.; On the Botany of the Auckland Isthmus and the North Shore of the Waitemata, by T. Kirk; On a Carbonaceous Mineral found at Whangarei Heads, by Captain F. W. Hutton, F.G.S.; Notes on recent Additions to the New Zealand Flora, by T. Kirk; On the Artesian Wells of Napier, by Captain F. W. Hutton, F.G.S.; On the Occurrence of Native Mercury at the Bay of Islands, by Captain F. W. Hutton, F.G.S.; On the analogy between the Indo-European languages and the Maori, by E. Fairburn; On the Botany of the Country between Whangarei and

# AIM Ann Report 1870 to 1871

the North Cape, by T. Kirk; On a supposed Native Rat observed at Whangarei; On the Use of the Semi-circular Protractor, with a description of an Improved Form of that Instrument, by James Stewart, C.E.; On New Zealand Flax, by T. F. S. Timne; Description of New Plants, by T. Kirk; On Economical Railways and Rolling Stock, by James Stewart, C.E.; On Certain Projected Street Improvements, by R. W. Dyson.

A lecture on the manufacture of "New Zealand Flax" was kindly delivered by Captain F. W. Hutton, and, at the request of persons engaged in its export, has been separately printed for the use of the public. Considerable discussion was elicited by the lecture, as well as by many of the papers. The papers will be printed in the forthcoming volume of "Transactions of the New Zealand Institute," now in the hands of the printer.

The contributions to the Museum have been unusually numerous and valuable, as will be seen from the appended list. The Council would particularly direct attention to the important collections presented by the Director of the Colonial Museum, and takes this opportunity of recording the value it places upon the labours of that gentleman to further the objects of the Institute. The number of visitors to the Museum has largely increased, and the Council has felt it necessary to incur a considerable outlay in connection with both the Museum and Library.

It was deemed advisable to open negotiations with the Mechanics' Institute with the object of effecting union of action on the part of both bodies. The plan suggested by the Council proposed practical amalgamation on all points involving joint interest, such as the maintenance of a free public library, lectures, classes, &c., buildings, insurance, &c., but left to each body the working out of its special functions, and the undivided control of its separate portion of the building. A general meeting of the members of the Mechanics' Institute was held, at which a committee was appointed to confer with the Council of this Institute. The question was fairly discussed at a meeting of the Committee and Council, and on the whole was favorably regarded: but no further communication has passed, and the Council can now only express its readiness to consider any proposition that may be made by the Mechanics' Institute. The only objection of the slightest value that has yet been urged to the proposed union is that it would necessarily involve the removal of

# AIM Ann Report 1870 to 1871

7

the Mechanics' Institute from its present site to that occupied by the Museum buildings. There can, however, be no question that the inconvenience which would be caused by the removal has been greatly exaggerated. The discussion of this question has, however, prevented the committee, appointed to consider the utilisation of the site of the Museum building from drawing up a report, as it is obvious that, in the event of the proposed union being effected, buildings of a different kind from those which would meet the requirements of this Institute alone would be required.

The Council has great satisfaction in stating that a grant of one hundred pounds has been made by the Provincial Council in aid of the Auckland Institute, the mode of its expenditure to be subject to the approval of the library committee. It is proposed to spend this sum in nearly equal moieties on the purchase of books for the public library, and special objects for the Museum. Particulars of the proposed expenditure have been placed in the hands of the Provincial Secretary, and it is expected that authority will shortly be given for payment of the grant.

At the October meeting his Honor the Superintendent was appointed to vote in the election of Governors of the New Zealand Institute, and has since been elected a Governor thereof. At the November meeting the following gentlemen were nominated for election as honorary members of the New Zealand Institute under the new statutes:—Dr. J. D. Hooker, C.B., F.R.S., &c.; Dr. F. von Mueller, C.M.G., F.R.S., &c.; Dr. Ferdinand von Hochstetter, Professor of Mineralogy at Institute of Vienna, &c. The result of the election has not yet transpired.

Forty-three copies of Transactions of the New Zealand Institute for 1869 have been received from the Board of Governors, to be disposed of for the benefit of the funds of this Institute, in lieu of a direct grant of money.

One of the most striking characteristics of the present day is the increasing appreciation of the value of scientific education as a means of developing the observing and perceptive faculties. The diffusion of scientific knowledge to this end, the advancement of science itself, and the development of the rich natural resources of our adopted country are amongst the objects to the furtherance of which the Council now earnestly invites the active assistance of every member.
